Droovee — Product Build Documentation (Phases 1 to 5)

Company-managed driver service, Bhubaneswar Odisha (24x7). Drivers drive the customer's own car. Generated 11 Oct 2026. Status: Phase 1 and Phase 2 built and tested; Phases 3-5 planned.

1. Running the system (development)

MongoDB	In-memory replica set on 127.0.0.1:27017 (node hold-mongo.js); seed with node dist/src/scripts
API	droovee-api — node dist/src/server.js — http://127.0.0.1:4000 (health: /api/v1/health)
Web	droovee-web — npm run dev — http://127.0.0.1:3000 (proxies /api/v1 to the API)
Admin login	http://127.0.0.1:3000/admin/login — owner@droovee.in / Admin#2026pass (ops, finance, suppo
Customer login	http://127.0.0.1:3000/login — phone 98765 00001 / Customer#2026

2. Configuration

Business number	src/lib/contact.ts (currently +91 81149 94367) or NEXT_PUBLIC_CONTACT_PHONE
Email (SMTP)	SMTP_HOST/PORT/USER/PASS/FROM in .env — free via Gmail App Password. Unset = ema
OTP	OTP_ENABLED=true to require it; OTP_DEBUG=true shows codes locally (never production)
Web URL	WEB_URL — used in password-reset email links

Phase 1 — Get more bookings (BUILT)

- Fast Booking without sign-in: POST /bookings/guest (name, OTP-verified mobile, WhatsApp, car, payment pref, terms). Rate-limited (5/hour/number), honeypot, estimate-first, booking ID + track link, keep-ID note, LAUNCH99 prefilled.
- Separate signed-in booking at /book/user (prefilled account, POST /bookings). Signing in never opens Fast Booking.
- Public tracking by booking ID **or** mobile number: /track (ID alone, phone list, or both).
- Forgot/reset password via email (30-min single-use token, signs out all sessions).
- Booking confirmation emails (SMTP) on guest, signed-in and staff-created bookings; logged in notification ledger.
- Floating Call/WhatsApp on every page + footer (contact, company, policies). Admin sign-in removed from footer.
- Trust section (Why Droovee), visible LAUNCH99 coupon, live homepage prices from admin settings.
- Homepage price calculator (service + hours + optional days + night halts). FAQ, About, Terms, Privacy, Cancellation pages.
- Policy notes everywhere: customer pays tolls/parking/fuel + driver food/stay/return; driver liable for damage while driving.
- How-it-works Assign no longer says salaried. Mobile admin hamburger menu.
- Staff Create Booking (POST /admin/bookings, /admin/bookings/new) with call/WhatsApp/website source.
- Admin quick price editor (per-service prices + charges, versioned + audited) alongside advanced JSON settings.

Phase 2 — Never miss a booking (BUILT)

- GET /admin/alerts: unassigned over 10 min, red under-2-hour no-driver warning, today's schedule (driver + confirmation state), driver reminders due, revenue today/week split cash vs online.
- Dashboard: red urgent banner, 30-second auto-refresh with sound beep on new overdue bookings (mutable), revenue cards, schedule and reminders with tap-to-call/WhatsApp.
- Automatic customer emails on confirm, assign/reassign, on-the-way, in-progress, complete, cancel (logged per booking; WhatsApp/SMS plug into the same function).
- Refunds recorded in the payment ledger with decider (refundMethod upi/card/cash). Cancellation fee + refund decided in status change.
- One-tap Call/WhatsApp for customer and driver on booking page; customer message history card; quick status chips on bookings list.
- Printable receipt / tax invoice per booking (Print to Save as PDF).
- Health check pings Mongo (ok/up) + JSON backup script (node dist/src/scripts/backup-local.js).

Phase 3 — Trust and quality (PLANNED)

- Pre-trip car photos by the driver (upload on booking, visible in dispute view).
- 4-digit trip start/end codes (customer shares; driver enters to start/complete).
- Driver link, no app: confirm job, mark on-the-way / arrived / started / completed.
- Family share-trip link (driver name + live status, no login).
- Ratings + reviews after every trip (shown on site; low ratings alert owner).
- Driver profile cards (photo, experience, languages) shown after assignment.
- Support tickets via WhatsApp + published reply-time target.
- Emergency procedure (accident / breakdown / unreachable): one plan, one number.

Phase 4 — Grow in Bhubaneswar (PLANNED)

- Late-night sober-driver service; fixed packages (Puri, Konark, airport, wedding); corporate/monthly plans + GST invoice.
- SEO pages + Odia option; Google Business Profile; referral/repeat rewards; partnerships; videos; WhatsApp catalog. Android app later.

Phase 5 — Run like a company (PLANNED)

- Written policies (confirmed: customer pays tolls/fuel/food/stay/return; driver liable for damage while driving).
- Hiring checklist, training/uniform, insurance, monthly reports, feedback review, privacy/limited data access.

Key API endpoints (prefix /api/v1)

- Public: pricing/estimate, services, bookings/guest, bookings/track, auth otp/register/login/forgot/reset.
- Customer: bookings (create), bookings/my, bookings/:id, bookings/:id/cancel.
- Admin: dashboard, alerts, bookings (+create), assign/reassign/status/fare/contact-log/offline-payment, receipt data via detail+payments, notifications, drivers, availability, customers, coupons, settings (pricing write), staff, tickets, audit-logs, reports.

Still needed from the business

- WhatsApp Business provider + templates (for auto WhatsApp messages).
- Payment gateway choice (Razorpay suggested, unconfirmed) + merchant onboarding.

- Gmail SMTP app-password for real emails (works in dev without it).
- Minimum booking hours, lead time, waiting charge, cancellation fee table, coverage area limits.
